

## MetaLine® SP1

Coatings made in Germany - since 1960

## Gritblasting gun for professional cleaning & roughening work

Small handhold blasting gun operated by compressed air. Designed for the effective and fast surface treatment of **local** areas. **Removes corrosion & scale.** Longlife characteristics due to wear resistant functional parts.

- **easy to handle**
- **durable**
- **low cost**

Simply place the grit hose in blasting media. By pulling the trigger the gun soaks it automatically in (vacuum principal). Arriving at the nozzle, the air-stream will extremely speed up the grit and it will hit any surface with high speed/pressure. Use **sharp contoured** grit to roughen surfaces. The bigger the mesh size, the **rougher** the surface will become. Use beadlike blasting medias to smoothen or polish surfaces.

Take care for all necessary safety precautions for blasting processes. Use reliable protective clothing, gloves and a full face protection. For industrial use only. Keep away from children. Never direct the gun towards human beings or animals. Air connection via European **quick-couplings** only. The correct working pressure has to be adjusted via a separate air pressure regulator. Never use oxygen or flammable gases to operate the equipment. Disconnect the gun from air-supply for any cleaning or maintenance work. **Never** use sand as grit media (health danger). **Lubricate** the ‚Ventilstift‘ (Pos. 6) and ‚Bolzen‘ (Pos. 13) regularly.

<b>Air consumption</b>	380 Liters/minute
<b>Air pressure</b>	maximum 8,0 bars
<b>Nozzle diameter</b>	5 mm
<b>Grit size specification</b>	0,1 mm to 2 mm
<b>Grit consumption</b>	Up to 1,5 kg/minute
<b>Length of grit hose</b>	2 meters
<b>Diameter of grit hose</b>	9 mm
<b>Compressed air quality</b>	Dry & free of oil
<b>Length of blasting gun</b>	205 mm
<b>Total equipment weight</b>	800 grams
<b>Packaging size</b>	1 Gritblasting gun
<b>Price (Valid from 10/21)</b>	160,00 EUR plus VAT
